Next generation ready-to-use insulation sets for deaerators and dirt separators

Spirotech is equipping its deaerators and dirt separators with new, ready-to-install insulation sets in a new Spirotech design. This means that HVAC engineers are now able to comply with insulation standards for these components.

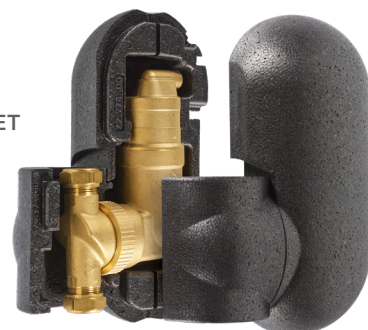

TAB050 INSULATION SET

TAR200 INSULATION SET

TUR100V INSULATION SET

TUR100 INSULATION SET

Spirotech's deaerators and dirt separators of a more compact size are fully enclosed with prefabricated insulation shells, made of expanded polypropylene. They encase the relevant components, including the pipe connection to secure optimal insulation. The black-and-yellow insulation sets feature an attractive design and are immediately noticeable and recognisable.

The following Spirotech products can be fitted with the new insulation sets: SpiroTrap dirt separators (including MB3), SpiroTop automatic air vents, SpiroVent deaerators, both with swivel connection (RV2) and with fixed connection. The insulation sets can be obtained separately as well as in combination with the relevant air vent, air or dirt separator.

Benefits

- Easy to apply
- Excellent fit, rugged design
- Optimised insulation reduces operational costs
- Protecting your investment and conservation of energy

Available versions

Article Nr.	Designed for	Availability
TAB050	SpiroTop	w42/2017
TAR200	SpiroVent and SpiroTrap brass with 2" connection size	w42/2017
TUR100	SpiroVent and SpiroTrap brass with universal connection	w46/2017
TAR100V	SpiroVent and SpiroTrap brass with fixed vertical connection	w46/2017
